

Martin Götte

He is an Assistant Professor (PD) for Medical Biochemistry at the Department of Gynecology and Obstetrics of the University of Münster, Germany. He obtained his diploma (Biology) in 1994 at the University of Münster, and his Ph.D. (Biochemistry) in 1997 from the University of Göttingen and the Max-Planck-Institute for Biophysical Chemistry. After a postdoctoral research period in Merton Bernfields Laboratory at Harvard Medical School, Boston USA, he became a group leader in Hans Kresses laboratory at the Institute of Physiological Chemistry of Münster University. Since 2003, he holds a tenured position as head of the research laboratory of the Department of Gynecology and Obstetrics of Münster University. His main areas of research cover various aspects of matrix pathobiochemistry, with a strong focus on the role of cell surface heparan sulfate proteoglycans and interstitial dermatan sulfate proteoglycans, as well as glycosaminoglycan biosynthetic enzymes in breast cancer and inflammation. Methodological approaches include the use of knockout mouse diseases models, patient-derived primary cells and cell lines, which are investigated using a broad range of cell biological, biochemical and molecular biological techniques. He is a member of the editorial boards of several peer-review journals, and he has served as a grant reviewer for several international organizations, including the European Commission, the German Research Council DFG, and the French National Research Agency (ANR). Dr. Götte has authored more than 75 publications in peer-reviewed journals and his work has been cited more than 3200 times (H-index=21).
