

Dimitrios H. Vynios

Dimitrios H. Vynios, Ph.D., is a Professor of Connective Tissue Biochemistry at the Department of Chemistry, University of Patras, Greece. He received his Ph.D. in Biochemistry at the Department of Chemistry, University of Patras. In 1990 he received a Post-Doctoral Fellowship from FEBS to work in the Laboratory of Biochemistry at the Kennedy Institute of Rheumatology, London, UK. After returning to Greece, he joined Laboratory of Biochemistry at the University of

Patras, initially as a Lecturer and in 2007 as a Professor. He is working in isolation, macromolecular structure, biochemical characterisation, and immunological properties of proteoglycans/glycosaminoglycans and enzymes of various organisms, in normal and pathologic conditions, together with the development and application of bioanalytical methods. The last fifteen years his work is focusing on the role and the importance of ECM macromolecules in cancer, as well as the enzymes implicated in their metabolism.
